#### **DATA LABEL: PUBLIC**

#### **AUDIT COMMITTEE**

#### **FRAUD AND IRREGULARITY 2021/22**

#### REPORT BY AUDIT, RISK AND COUNTER FRAUD MANAGER

#### A. PURPOSE OF REPORT

To inform the Audit Committee of the Audit Scotland report Fraud and Irregularity 2021/22.

#### B. RECOMMENDATION

It is recommended that the Audit Committee considers the themes and messages in the report.

#### C. SUMMARY OF IMPLICATIONS

I	Council Values	Being honest, open and accountable, making best use of our resources.
II	Policy and Legal (including Strategic Environmental Assessment, Equality	The council's Anti-Fraud and Corruption Policy sets out a zero tolerance policy to all forms of fraud and corruption.
	Issues, Health or Risk Assessment)	Relevant to council risk WLC020: "Failure to prevent and detect fraud / theft".
Ш	Implications for Scheme of Delegations to Officers	None.
IV	Impact on performance and performance Indicators	Weaknesses in internal control may have an adverse impact on performance.
V	Relevance to Single Outcome Agreement	Our public services are high quality, continually improving, efficient and responsive to local people's needs.
VI	Resources - (Financial, Staffing and Property)	None.
VII	Consideration at PDSP	None.
VIII	Other consultations	None.

#### D. TERMS OF REPORT

#### D.1 Introduction

Audit Scotland's report shares information about cases where internal control weaknesses in public bodies have led to fraud and irregularity. External auditors have shared specific details about significant frauds and other irregularities in public bodies during 2021/22.

External auditors are required to report frauds or suspected frauds to Audit Scotland where they are caused or facilitated by weaknesses in public bodies' internal controls. Frauds and irregularities are considered significant where the value of the loss is over £5,000 or where it is of significance owing to the nature of the activity.

#### D.2 Fraud and Irregularity Identified

The report groups the key fraud risks identified by external auditors into the following categories:

- Pension fund;
- Expenditure fraud;
- Income fraud;
- Covid-19 funding;
- Cybercrime.

The report sets out case studies as examples of the categories and identifies control weaknesses which contributed to the fraudulent and irregular activity as follows:

- Not checking customer details are up to date;
- Procedures not being followed;
- Weak IT security arrangements;
- A lack of staff training;
- A weak authorisation process for payments;
- Easily circumvented procedures.

The report recommends that public bodies ensure that effective counter-fraud arrangements are in place, and specifies ways of reducing fraud risks.

#### D.3 West Lothian Council: Counter Fraud and Internal Audit Activity

The annual counter fraud plan provides for the maintenance of the whistleblowing hotline, the recording and investigation of fraud referrals, and the provision of counter fraud training. Both counter fraud and internal audit teams maintain good communication channels with services. The counter fraud team advises the Audit Committee of any significant frauds established, and keeps the Audit Committee informed of progress on the counter fraud plan via interim and annual reports. The most recent counter fraud annual report covering the financial year 2021/22 was submitted to the Audit Committee on 21 June 2022.

The annual internal audit plan is the council's mechanism for ensuring that there is a regular and independent review of controls in place to mitigate key risks to the council's objectives. The internal audit plan normally includes coverage of key fraud risks and the 2022/23 plan includes audits in relation to fraud risks such as security of stores, plant and equipment, school funds, and cyber security.

Where counter fraud and internal audit reports identify weaknesses an action plan containing improvement actions is agreed with management. Findings considered to be of "high" importance are entered into Pentana as risk actions and followed up as a matter of course to determine progress. High importance findings which are not implemented are reported to the Audit Committee.

#### E. CONCLUSION

The Audit Scotland report highlights cases of fraud an irregularity identified during 2021/22, and sets out ways to reduce fraud risks.

# Fraud and irregularity 2021/22

Sharing risks and case studies to support the Scottish public sector in the prevention of fraud

# **Key messages**

The Covid-19 pandemic heightened the risk of fraud as new systems and ways of working were introduced.

# 1. The Covid-19 pandemic introduced many challenges for the Scottish public sector

Public Bodies delivered both existing and new services in new working environments. These changes resulted in additional fraud risks for public bodies to manage.

#### 2. New challenges

Despite these new challenges, auditors have found that most bodies have responded well by introducing new systems, procedures, and controls.

## Key messages continued

# 3. The Covid-19 pandemic has seen new fraud introduced

For example, fraudsters have targeted the grants to support businesses through the pandemic. Steps have subsequently been taken to reduce fraud and error in these schemes by grant-paying bodies and government.

# 4. Weaknesses in controls contributed to seven cases of fraud and irregularities totalling over £354,000

During 2021/22, internal control weaknesses contributed to seven cases of fraud and irregularity valued at over £354,000 being identified in public bodies. In comparison, 13 cases of fraud and irregularity valued at £401,500 were identified during 2020/21. Despite many challenges facing public bodies over the past two years because of the Covid-19 pandemic, the value of fraud and irregularity detected remains low compared to the 2021/22 annual Scottish budget of £54 billion.

Audit Scotland's counter-fraud hub contains useful counter-fraud information.

### Recommendations

# Public bodies should ensure effective counter-fraud arrangements are in place. These include:

- having effective governance and oversight arrangements for counter-fraud
- understanding the current and emerging counter-fraud risks facing the body
- regularly reviewing their counter-fraud strategy and counterfraud plan
- regularly assessing and reviewing internal controls and governance arrangements to ensure they remain effective
- considering whether the risks and weaknesses in controls identified in this report may exist in their organisation and taking appropriate corrective actions
- reviewing the independent reviews and associated recommendations that were commissioned by the Scottish Environment Protection Agency (SEPA) following a ransomware attack on its systems.

#### **Auditors should confirm that:**

- the governance arrangements in place in their audit clients are effective, regularly reviewed and amended as appropriate for new fraud risks
- internal controls are operating effectively to help prevent fraud and irregularity, including the examples detailed in this report.

# Fraud and irregularity identified during 2021/22

Auditors have provided Audit Scotland with details of cases of fraud and other irregularity discovered in their audited bodies during 2021/22. This report sets out examples of the various categories of fraud and irregularity reported during 2021/22 and the control weaknesses which contributed to these cases.

#### Aims of this report

This report shares information about cases where internal control weaknesses in public bodies have led to fraud and irregularity, to help prevent similar circumstances happening again. External auditors have shared specific details about significant frauds and other irregularities in public bodies during 2021/22. The level of fraud and irregularity reported by external auditors was over £354,000, which is a very small proportion of the 2021/22 Scottish budget of £54 billion.

External auditors are required to report frauds, or suspected frauds, to Audit Scotland where they are caused or facilitated by weaknesses in public bodies' **internal controls**. Frauds and irregularities are considered significant where the value of the loss is over £5,000 or where it is of significance owing to the nature of the activity.

The cases included in this report are likely to have been investigated internally, but it is not necessary for the police to have been involved or for it to have been proven as fraud in a court of law.

Reporting cases about fraud and irregularity and sharing information about what happened helps highlight weaknesses in internal controls and aims to help prevent similar circumstances from happening in other public bodies.

**Internal controls** help organisations to respond to risks, to comply with legislation and regulations and to prepare quality financial information. This includes policies and procedures organisations put in place to help prevent errors and irregularities.

Public bodies are encouraged to consider whether the weaknesses in internal control that facilitated each of the cases highlighted in this report may also exist in their own arrangements and take the required corrective action.

#### Fraud and irregularity identified during 2021/22

Fraud and irregularity reported during 2021/22 totals over £354,000 and falls into the following categories:

1 case
Pension fund

1 case
Procurement cards

1 case Invalid supplier

1 case
Ticket income

**2 cases**Covid-19 funding - 2 cases are included in this report as examples.

1 case IT and cybercrime

#### **Control weaknesses**

The fraudulent and irregular activity reported by external auditors during 2021/22 highlighted control weaknesses which contributed to the fraudulent and irregular activity.

Not checking customer details are up to date

Procedures not followed

Weak IT security arrangements

A lack of staff training

A weak authorisation process for payments

Easily circumvented procedures

Specific details of the fraud and irregularity are reported on the following pages.

#### **Pension fraud**

Pension fraud relates to people receiving payments from a pension fund to which they are not entitled.

#### **Case Study 1: Pension fraud**

A family member of a deceased pensioner continued to collect £300,000 of pension payments over a 31-year period from a public sector pension fund.

#### **Key features**

The pension fund was not notified of the death of the pensioner and the pension payments continued to be paid.

The fraud was discovered by the pension fund after mail sent to the deceased pensioner was returned.

The fraud was possible as the pensioner's death pre-dated datamatching controls which are now in place to automatically highlight when a pensioner has died.

The pension payments have been stopped and the matter reported to Police Scotland.

#### **Expenditure fraud**

Expenditure frauds relate to cases where a body has incurred additional expenditure because of fraud. This may be due to invalid suppliers, fictitious invoicing, or the redirection of payments intended for legitimate suppliers.

Action
Fraud UK is
the national
centre where
individuals
can report fraud and
cybercrime.

#### Case Study 2: Corporate procurement card fraud

A council employee misused a corporate procurement card to fund personal purchases valued at over £7,300.

#### **Key features**

The employee used an emergency authorisation process to bypass the requirement to obtain authorisation at a local level. It was therefore not identified that the purchases were not legitimate. The employee also dishonestly accessed emails and misused a computer system to fraudulently authorise their own purchases.

The fraud was identified through budgetary control processes.

The employee has been dismissed and reported to the Procurator Fiscal. Two managers are also subject to the council's disciplinary procedures.

The council has since provided staff with detailed instructions and training which outline the proper process for using and authorising corporate procurement cards.

#### Case Study 3: Invalid supplier

A third party defrauded over £23,000 from a public body by purporting to be a supplier to the body.

#### **Key features**

The public body received a request by email to amend a supplier's bank account details. The supplier's email address had been intercepted by a fraudster who requested the change.

The fraud was possible as the public body did not telephone the supplier to verify the change of bank details.

The issue was identified when the genuine supplier queried why the payment had not been received.

The public body's internal audit team has reviewed the process for changing suppliers' bank account details. Improvements have been made to procedures and training has been provided for relevant staff.

The matter has been reported to Police Scotland and **Action Fraud UK** has also been notified of the case.

#### **Income fraud**

Income fraud relates to cases where a body has lost income because of fraud.

#### Case Study 4: Admission ticket income

Third parties defrauded over £8,600 in admission ticket income from a public body.

#### **Key features**

Unknown third parties fraudulently purchased and then resold admission tickets for events. The purchases were made using credit cards issued by an international provider. A loss was incurred as tickets had been used before the fraud was identified.

The fraud was discovered when the genuine cardholders subsequently requested refunds.

The fraud was facilitated by the international card provider not having secondary authentication procedures in place. The public body has stopped accepting credit cards without any secondary authorisation procedures in place.

Processes have been put in place to enhance card holder authentication for card payments.

#### **Covid-19 funding fraud**

Covid-19 funding fraud relates to cases where fraudulent funding applications have been paid.

UK Government funding to the Scottish Government to support businesses and individuals throughout the Covid-19 pandemic was provided quickly, and often with lower levels of scrutiny and due diligence than are normally in place. Support was often provided to individuals and businesses that the paying organisation had no previous relationship with. This made verification of claims for funding difficult. To get the funding out quickly to those in need, the Scottish and UK governments introduced schemes which relied on self-declaration by the claimant

This has resulted in applicants being paid funding which subsequently have been found to have been fraudulent.

The value of some **grants** paid by councils depended on the type of business and the rateable value of the business premises.

#### **Case Study 5: Covid-19 funding (1)**

A council paid out a £10,000 Covid-19 business support **grant** which later was discovered to be fraudulent.

#### **Key features**

A fraudster submitted an application supported by a forged lease document for the business premises and a forged bank statement. A previous fraudulent change in ratepayer had been notified to the council.

The fraud was identified when the legitimate applicant submitted a grant application.

A second subsequent application has since been made for another grant in a subsequent grant-funding phase. The council did not process this second application.

The council has shared the details of the fraudulent application with other public bodies and has notified Police Scotland.

#### Covid-19 funding fraud (continued)

#### Case Study 6: Covid-19 funding (2)

A public body paid out a grant of £5,250 to a business based on an application having been received with a self-declaration by the business. The business stated that it had been adversely impacted by Covid-19. The public body paid out funds in accordance with the instructions and procedures issued by the Scottish Government.

#### **Key features**

The public body subsequently received a communication from a third party highlighting concern over the award of the funding to this business. The public body's internal audit team carried out a review and requested further supporting evidence. This established that the recipient did not meet the eligibility criteria for the funding.

The public body is seeking recovery of the grant paid.

#### **Cybercrime**

Cybercrime relates to losses due to crime which has been committed using computer systems and IT networks.

#### **Case Study 7: Cyber-attack**

SEPA suffered a cyber-attack and subsequent data loss on 24 December 2020. Our 2020/21 Fraud and irregularity report contained initial details which were known at that time. Further details and learning from the attack are now available and a summary is provided below.

#### **Key features**

The cyber-attack resulted in SEPA being unable to retrieve a significant amount of its data. This was despite independent reviews finding that SEPA had a high level of cyber security maturity. The criminals demanded a ransom which SEPA did not pay.

Investigations have not yet identified the exact route source of where the cyber-attack breached SEPA's systems. However, there are indications that it was through a **phishing** attack. This means there may have been a degree of human error involved, which is very difficult to mitigate against.

SEPA immediately implemented its emergency management arrangements in response to the cyber-attack. It also worked with the Scottish Government, Police Scotland, the National Cyber Security Centre (NCSC) and the Scottish Business Resilience Centre (SBRC) to deliver a recovery strategy.

SEPA commissioned <u>independent reviews</u> to assist it and other public-sector organisations in learning from the incident and to help protect itself and others from ongoing cyber threats. The independent reviews identified a number of recommendations.

Public-sector bodies should review these recommendations and learn lessons from what has happened to SEPA. This incident highlights that no organisation can fully mitigate the risk of the ever-increasing threat and sophistication of a cyber-attack but it is crucial that organisations are prepared.

The Auditor General has published a <u>report</u> on the cyber-attack against SEPA.

Phishing is where criminals send emails purporting to be from reputable sources to deceive individuals into providing information or data such as passwords, or

to click on a link that allows malware to be downloaded.

# Ways to reduce counter-fraud risks

There are many ways that public bodies can attempt to mitigate the risk of fraud as well as trying to prevent fraudulent activity from occurring. This includes:

- understanding the organisation's fraud risks. An appropriate counterfraud strategy and plan should be in place
- ensuring appropriate governance arrangements are in place, with oversight of counter-fraud arrangements
- agreeing the organisation's fraud risk appetite and approach to newly-emerging risks
- having appropriate fraud prevention and detection processes in place
- regularly carrying out a fraud risk assessment to identify vulnerable areas
- having internal audit regularly reviewing and evaluating controls to ensure they operate effectively and can adapt to new or emerging risks
- ensuring staff are appropriately trained in their area of work. This will include counter-fraud training specific to their role
- ensuring processes are in place to report any suspected fraud or error
- having effective fraud response arrangements in place

- reviewing any instances of fraud or error for any lessons that could be learnt to prevent future losses
- using digital innovations, eg data analytics, to help identify weakness in controls
- using data matching such as the National Fraud Initiative (NFI) and analytical procedures to help identify fraud or error
- working collaboratively with partners to prevent and detect fraud
- ensuring IT systems are protected and the latest guidance from bodies such as the National Cyber Security Centre is followed.

**The NFI** is a data matching exercise that matches electronic data within and between public and private-sector bodies to prevent and detect fraud.
